the 1990s, the number of people with a diagnosis of schizophrenia has increased in many countries (1).

There is a growing awareness of the need to improve the quality of life of people with schizophrenia. This has led to a focus on the development of psychosocial interventions, which aim to help people with schizophrenia to live more independently and to participate more fully in society (2).

One of the most common psychosocial interventions is cognitive remediation. This involves teaching people with schizophrenia how to think and learn more effectively. It can help to improve their ability to work, study, and manage their daily lives (3).

Another common psychosocial intervention is social skills training. This involves teaching people with schizophrenia how to interact with others and how to manage social situations. It can help to improve their ability to form and maintain relationships (4).

There are many other psychosocial interventions that can be used to help people with schizophrenia. These include family therapy, supported employment, and assertive case management (5).

The choice of psychosocial intervention will depend on the individual needs and preferences of the person with schizophrenia. It is important to work with a mental health professional to develop a plan that is tailored to the individual (6).

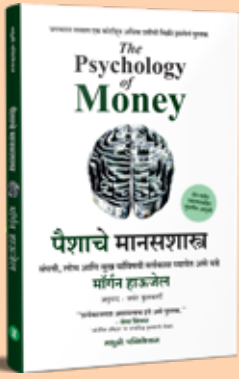

Psychosocial interventions can be very effective in helping people with schizophrenia to live more independently and to participate more fully in society. They can also help to reduce the risk of relapse and hospitalization (7).

It is important to note that psychosocial interventions are not a substitute for medication. They should be used in conjunction with medication and other treatments (8).

There is a need for more research into the effectiveness of psychosocial interventions for schizophrenia. This will help to identify the most effective interventions and to develop new ones (9).

Psychosocial interventions are an important part of the treatment of schizophrenia. They can help to improve the quality of life of people with schizophrenia and to reduce the risk of relapse and hospitalization (10).
